Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 17 June 2002.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

DETAILED ACTION

Continued Prosecution Application

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6 and 8-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Parulski et al (US5040068).

Parulski teaches an image recording unit, 30 (image processing unit) with interchangeable image pickup units, 4a and 4b (monochrome and color, high and low resolution). In a first embodiment, figure 1, a coding means, 14, sends identifying signals to the recording unit for identifying the image pickup unit (mono and color) based on the characteristics of the sensor (see col. 3, lines 49-61; also col. 4, lines 9-19). Similarly, in a second embodiment, figure 2, a coding means is used to identify the image pickup unit (high and low resolution), however, in addition, a signal processing section is added (84, in figure 2). The signal processor includes processing such as color separation, white balance, gamma correction, etc (see col. 5, lines 57-68 and col.

6, lines 1-9). Additionally, in the second embodiment, the A/D converter, 34, is inside the image pickup unit.

Regarding claims 1 and 6, Parulski discloses, in two separate embodiments- figures 1 and 2, an image processing apparatus (30) for carrying out image processing on digital image signals, which have been acquired with different kinds of digital cameras (interchangeable image pickup units 4a and 4b), the apparatus comprising:

input means (30) for reading the digital image signals and receiving camera kind information (code means 30 sends identifying signals), which represents the different kinds of digital cameras (mono or color);

recording means (Examiner notes that in identifying which pickup unit is attached, the code means inherently stores "condition information" associated with the respective imager, mono or color) for recording condition information, which represents image processing conditions for the different kinds of digital cameras, the image processing conditions including values for at least one of gradation correction and color correction of the digital image signals (see col.5, lines 57-68);

selection means (the processor inherently has a selection means in order to perform proper processing on the respective imagers) for selecting optimum image processing conditions from the condition information, in accordance with the camera kind information (see col. 6, lines 10-24); and

image processing means (84) for carrying out image processing on the digital image signals under the selected optimum image processing conditions (see examiners notes above).

Art Unit: 2612

Regarding claim 2, Parulski discloses statistical information (shutter, aperture, speed of image sensor) of the digital image signals is calculated (see col. 5, lines 3-8), and the image processing conditions are determined in accordance with the statistical information.

Regarding claim 3, Parulski discloses displaying the identity of the pickup unit (see col. 4, lines 65-68 and col. 5, lines 1-3).

Regarding claim 4, see Examiner's notes above.

Regarding claim 5, Parulski discloses manually inputting the camera kind information (see col. 9, lines 3-8).

Regarding claim 8, see claim 2 above.

Regarding claim 9, see claim 3 above.

Regarding claim 10, see Examiner's notes above.

Regarding claim 11, see claim 5 above.
